***Modulbereich 1***

---

***Image Acquisition***

Studiensem.	Regelst.sem.	Turnus	Dauer	SWS	ECTS
<b>1-2</b>	<b>4</b>	<b>occasional</b>	<b>1 semester</b>	<b>4</b>	<b>6</b>

**Modulverantwortliche/r** Dr. Pascal Peter

**Dozent/inn/en** Dr. Pascal Peter

**Zulassungsvoraussetzungen** Undergraduate knowledge in mathematics (e.g. *Mathematik für Informatiker I-III*). Basic knowledge in physics is helpful, but the lecture is designed to be self-contained in this regard.

**Leistungskontrollen / Prüfungen** Passing the exam or re-exam. Regular attendance in the weekly assignments which are intended to be solved and discussed during the tutorial session.

**Lehrveranstaltungen / SWS** 2 h lectures  
+ 2 h tutorial  
= 4 h (weekly)

Homework assignments (theory and programming) and classroom assignments.

**Arbeitsaufwand** 60 h of classes  
+ 120 h private study  
= 180 h (= 6 ECTS)

**Modulnote** The final grade reflects the performance in the exam or the re-exam. The better grade counts.

**Sprache** English

## Lernziele / Kompetenzen

A broad variety of image acquisition methods is described, including imaging by virtually all sorts of electromagnetic waves, acoustic imaging, magnetic resonance imaging and more. While medical imaging methods play an important role, the overview is not limited to them.

Starting from physical foundations, description of each image acquisition method extends via aspects of technical realisation to mathematical modelling and representation of the data.

## Inhalt

1. Introduction and Basic Concepts
2. Imaging by Visible Light 2.1 Electromagnetic Spectrum 2.2 Optics, Sensorics, Photography 2.3 Colour Spaces, Telescopes, Mirrors, Microscopy 2.4 Dual Photography, Depth Imaging, Holography, Light Fields
3. Imaging by Invisible Electromagnetic Radiation 3.1 X-Ray and Gamma-Ray Imaging in 2-D 3.2 Computerised X-Ray Tomography 3.3 Radioastronomy, Radar, Terahertz Radiation, Microwave and Radio Wave Imaging 3.4 Magnetic Resonance Imaging
4. Imaging without Electromagnetic Radiation 4.1 Electron Microscopy 4.2 Acoustic Waves, Sonar, Ultrasound

Studiensem.	Regelst.sem.	Turnus	Dauer	SWS	ECTS
<b>1-2</b>	<b>4</b>	<b>jedes Sommersemester</b>	<b>1 Semester</b>	<b>2</b>	<b>3</b>

**Modulverantwortliche/r** Prof. Dr. Ute Rabe

**Dozent/inn/en** Prof. Dr. Ute Rabe

**Zulassungsvoraussetzungen** keine

**Leistungskontrollen / Prüfungen** benotete Klausur (schriftlich oder mündlich)

**Lehrveranstaltungen / SWS** 2 SWS Vorlesung  
= 2 SWS

**Arbeitsaufwand** 30 h Präsenzstudium  
+ 60 h Eigenstudium (Vor- und Nachbereitung, Prüfung)  
= 90 h (= 3 ECTS)

**Modulnote** Wird aus den Leistungen in der Klausur ermittelt. Die genauen Modalitäten werden zu Beginn des Moduls bekannt gegeben.

**Sprache** Deutsch

## Lernziele / Kompetenzen

Die Studierenden erwerben umfangreiche Kenntnisse und Fertigkeiten in:

- Grundkonzepte der physikalischen Akustik
- Einführung in die Materialprüfung mit Ultraschall
- Gerätetechnische Aspekte
- Praxisbezogene Anwendungsbeispiele

## Inhalt

- Schwingungen, Schallwellen, Ultraschall
- Anregung und Empfang von Ultraschallwellen, Methoden der Bildgebung (A-B-C-Scan)
- Beugung und Fehlergrößenbestimmung
- Ultraschall-Mikroskopie
- Anwendungsbeispiele

## Literaturhinweise

Literaturhinweise werden zu Beginn der Veranstaltung bekannt gegeben.

- A. Ehrhard, Verfahren der zerstörungsfreien Materialprüfung, DVS Media GmbH, Berlin, 2014

## Weitere Informationen

**Methoden:** Powerpoint-Präsentation über Beamer unterstützt durch Overhead-Projektor, Demonstrationsexperimente

Studiensem.	Regelst.sem.	Turnus	Dauer	SWS	ECTS
<b>1-2</b>	<b>4</b>	<b>jedes Wintersemester</b>	<b>1 Semester</b>	<b>3</b>	<b>4</b>

**Modulverantwortliche/r** Prof. Dr. Ute Rabe

**Dozent/inn/en** Priv. Doz. Dr. Martin Spies  
und Mitarbeiter des IZFP

**Zulassungsvoraussetzungen** *Physikalische Akustik 1* (empfohlen)

**Leistungskontrollen / Prüfungen** benotete Klausur (schriftlich oder mündlich)

**Lehrveranstaltungen / SWS** 2 SWS Vorlesung  
+ 1 SWS Übung  
= 3 SWS

**Arbeitsaufwand** 45 h Präsenzstudium  
+ 75 h Eigenstudium (Vor- und Nachbereitung, Prüfung)  
= 120 h (= 4 ECTS)

**Modulnote** Wird aus den Leistungen in der Klausur ermittelt. Die genauen Modalitäten werden zu Beginn des Moduls bekannt gegeben.

**Sprache** Deutsch

## Lernziele / Kompetenzen

Die Studierenden erwerben umfangreiche Kenntnisse und Fertigkeiten in:

- Grundlegende Konzepte der Bildgebung und Rekonstruktion
- Beschreibung der Schallausbreitung in komplexen Werkstoffen
- Grundlagen der Modellierung und Simulation
- Theoretische Grundlagen der Beschreibung der verschiedenen Wellenarten
- Praxisbezogene Anwendungsbeispiele

## Inhalt

- Beschreibung der Ultraschallwellen im 3-dimensionalen Medium
- Methoden der Simulation
- Ausbreitung von Ultraschall in elastisch anisotropen Medien
- Phased Array, Total Focusing Method, Synthetic Aperture Focusing Technique (SAFT)
- Anwendungsbeispiele

## Literaturhinweise

Literaturhinweise werden zu Beginn der Veranstaltung bekannt gegeben.

- James P. Wolfe, *Imaging Phonons, Acoustic Wave Propagation in Solids*, Cambridge University Press, 1998
- B.A. Auld, *Acoustic Fields and Waves in Solids*, Vol I, II, Robert E. Krieger Publishing, 1990

## Weitere Informationen

**Methoden:** Powerpoint-Präsentation über Beamer unterstützt durch Overhead-Projektor, Demonstrationsexperimente, rechnerische Vertiefung der Vorlesungsinhalte im Rahmen der Übung

Studiensem.	Regelst.sem.	Turnus	Dauer	SWS	ECTS
<b>1-2</b>	<b>4</b>	<b>every winter semester</b>	<b>1 semester</b>	<b>2</b>	<b>4</b>

**Modulverantwortliche/r** Dr. Marc Fournelle

**Dozent/inn/en** Dr. Marc Fournelle

**Zulassungsvoraussetzungen** keine

**Leistungskontrollen / Prüfungen**

- Regular attendance of classes
- Final exam (oral or written)

**Lehrveranstaltungen / SWS** 2 h lectures  
= 2 h (weekly)

**Arbeitsaufwand** 30 h of classes  
+ 80 h private study  
= 120 h (= 4 ECTS)

**Modulnote** Will be determined from the performance in the final exam. The exact modalities will be announced at the beginning of the course.

**Sprache** English

## Lernziele / Kompetenzen

Understanding of ultrasound physics of technical applications and medical imaging.

## Inhalt

The lecture deals with the generation, the detection, the processing and the visualization of ultrasound signals in technical (e.g. sonar, level or flow control) and biomedical applications (medical imaging, navigation, therapy/therapy control):

- Physics and mathematics of ultrasound and ultrasound signal processing
- Description of the entire signal pipeline of an ultrasound system
- Basics of different measurement and imaging methods

## Literaturhinweise

Kuttruff - Physik und Technik des Ultraschalls. More will be announced at the beginning of the course.

## Weitere Informationen

This module was previously known as *Bildgebende Verfahren: Ultraschall*.

*Modulbereich 2*

---

*Image Analysis*

Studiensem.	Regelst.sem.	Turnus	Dauer	SWS	ECTS
<b>1-2</b>	<b>4</b>	<b>occasional</b>	<b>1 semester</b>	<b>4</b>	<b>6</b>

**Modulverantwortliche/r** Prof. Dr. Joachim Weickert

**Dozent/inn/en** Prof. Dr. Joachim Weickert

**Zulassungsvoraussetzungen** Requires undergraduate knowledge in mathematics (e.g. *Mathematik für Informatiker I-III*), and elementary C knowledge. Basic knowledge in image processing and computer vision is recommendable.

**Leistungskontrollen / Prüfungen** In order to qualify for the exams, attendance of the tutorials is mandatory. There will be an exam and a re-exam. Further modalities (such as written or oral exam) will be communicated at the beginning of the lecture.

**Lehrveranstaltungen / SWS** 2 h lectures  
+ 2 h tutorials  
= 4 h (weekly)

**Arbeitsaufwand** 60 h of classes  
+ 120 h private study  
= 180 h (= 6 ECTS)

**Modulnote** The grade reflects the performance in the exam or the re-exam. The better grade counts.

**Sprache** English

## Lernziele / Kompetenzen

In this lecture, we will discuss advanced topics in the fields of image processing and computer vision. Most of the presented methods fuse the information from several images in order to produce an enhanced composite image. Examples for such techniques are super-resolution, high dynamic range (HDR) imaging, tone mapping and gradient domain techniques.

## Inhalt

1. Introduction and Overview
2. Finding Correspondences
3. Super-Resolution
4. High Dynamic Range Imaging
5. Tone Mapping
6. Exposure Fusion
7. Alignment of Exposure Series
8. Deghosting and Joint Super-Resolution and HDR
9. Focus Stacking
10. Gradient Domain Techniques

## Literaturhinweise

There is no specific book that covers the complete content of this class. Many lectures will be based on articles from journals and conferences. However, the book of R. Szeliski covers some of the topics and additionally summarises most of the intensively studied areas of computer vision research:

- R. Szeliski: Computer Vision: Algorithms and Applications. ISBN: 978-1-84882-934-3, Springer, Berlin, 2011.

Studiensem.	Regelst.sem.	Turnus	Dauer	SWS	ECTS
<b>1-2</b>	<b>4</b>	<b>occasional</b>	<b>1 semester</b>	<b>4</b>	<b>6</b>

**Modulverantwortliche/r** Prof. Dr. Joachim Weickert

**Dozent/inn/en** Dr. Pascal Peter

**Zulassungsvoraussetzungen** Undergraduate mathematics (e.g. "Mathematik für Informatiker I-III") is required, as well as elementary C knowledge (for the programming assignments). Knowledge in image processing or differential equations is useful.

**Leistungskontrollen / Prüfungen**

- Regular attendance of lecture and tutorial
- Written or oral exam and the end of the course

**Lehrveranstaltungen / SWS** 2 h lectures  
+ 2 h tutorial  
= 4 h (weekly)

**Arbeitsaufwand** 60 h of classes  
+ 120 h private study  
= 180 h (= 6 ECTS)

**Modulnote** Will be determined from performance in exams. The exact modalities will be announced at the beginning of the module.

**Sprache** English

## Lernziele / Kompetenzen

Correspondence problems are a central topic in computer vision. Thereby, one is interested in identifying and matching corresponding features in different images/views of the same scene. Typical correspondence problems are the estimation of motion information from consecutive frames of an image sequence (optic flow), the reconstruction of a 3-D scene from a stereo image pair and the registration of medical image data from different modalities (e.g. CT and MRT). Central part of this lecture is the discussion of the most important correspondence problems as well as the modelling of suitable algorithms for solving them.

## Inhalt

1. Introduction and Overview
2. General Matching Concepts
  - 2.1 Block Matching
  - 2.2 Correlation Techniques
  - 2.3 Interest Points
  - 2.4 Feature-Based Methods
3. Optic Flow I
  - 3.1 Local Differential Methods
  - 3.2 Parameterisation Models
4. Optic Flow II
  - 4.1 Global Differential Methods
  - 4.2 Horn and Schunck
5. Optic Flow III
  - 5.1 Advanced Constancy Assumptions
  - 5.2 Large Motion
6. Optic Flow IV

- 6.1 Robust Data Terms
- 6.2 Discontinuity-Preserving Smoothness Terms
- 7. Optic Flow V
  - 7.1 High Accuracy Methods
  - 7.2 SOR and Liemar Multigrid
- 8. Stereo Matching I
  - 8.1 Projective Geometry
  - 8.2 Epipolar Geometry
- 9. Stereo Matching II
  - 9.1 Estimation of the Fundamental Matrix
- 10. Stereo Matching III
  - 10.1 Correlation Methods
  - 10.2 Variational Approaches
  - 10.3 Graph Cuts
- 11. Medical Image Registration
  - 11.1 Mutual Information
  - 11.2 Elastic and Curvature Based Registration
  - 11.3 Landmarks
- 12. Particle Image Velocimetry
  - 12.1 Div-Curl-Regularisation
  - 12.2 Incompressible Navier Stokes Prior

## **Literaturhinweise**

Will be announced before the start of the course on the course page on the Internet.

Studiensem.	Regelst.sem.	Turnus	Dauer	SWS	ECTS
<b>1-2</b>	<b>4</b>	<b>at least every two years</b>	<b>1 semester</b>	<b>6</b>	<b>9</b>

**Modulverantwortliche/r** Prof. Dr. Joachim Weickert

**Dozent/inn/en** Prof. Dr. Joachim Weickert

**Zulassungsvoraussetzungen** Undergraduate mathematics (e.g. "Mathematik für Informatiker I-III") and some elementary programming knowledge in C is required. Prior participation in "Image Processing and Computer Vision" is useful.

**Leistungskontrollen / Prüfungen**

- For the homework assignments one can obtain up to 24 points per week. Actively participating in the classroom assignments gives 12 more points per week, regardless of the correctness of the solutions. To qualify for both exams one needs 2/3 of all possible points.
- Passing the final exam or the re-exam.
- The re-exam takes place during the last two weeks before the start of lectures in the following semester.

**Lehrveranstaltungen / SWS** 4 h lectures  
+ 2 h tutorial  
= 6 h (weekly)

Homework assignments (theory and programming) and classroom assignments.

**Arbeitsaufwand** 90 h of classes  
+ 180 h private study  
= 270 h (= 9 ECTS)

**Modulnote** Will be determined from the performance in the exam or the re-exam. The better grade counts.

**Sprache** English

## Lernziele / Kompetenzen

Many modern techniques in image processing and computer vision make use of methods based on partial differential equations (PDEs) and variational calculus. Moreover, many classical methods may be reinterpreted as approximations of PDE-based techniques. In this course the students will get an in-depth insight into these methods. For each of these techniques, they will learn the basic ideas as well as theoretical and algorithmic aspects. Examples from the fields of medical imaging and computer aided quality control will illustrate the various application possibilities.

## Inhalt

1. Introduction and Overview
2. Linear Diffusion Filtering
  - 2.1 Basic Concepts
  - 2.2 Numerics
  - 2.3 Limitations and Alternatives
3. Nonlinear Isotropic Diffusion Filtering
  - 3.1 Modeling
  - 3.2 Continuous Theory
  - 3.2 Semidiscrete Theory
  - 3.3 Discrete Theory
  - 3.4 Efficient Sequential and Parallel Algorithms

4. Nonlinear Anisotropic Diffusion Filtering
  - 4.1 Modeling
  - 4.2 Continuous Theory
  - 4.3 Discrete Aspects
  - 4.4 Efficient Algorithms
5. Parameter Selection
6. Variational Methods
  - 6.1 Basic Ideas
  - 6.2 Discrete Aspects
  - 6.3 TV Regularisation and Primal-Dual Methods
  - 6.4 Functionals of Two Variables
7. Vector- and Matrix-Valued Images
8. Unification of Denoising Methods
9. Osmosis
  - 9.1 Continuous Theory and Modelling
  - 9.2 Discrete Theory and Efficient Algorithms
10. Image Sequence Analysis
  - 10.1 Models for the Smoothness Term
  - 10.2 Models for the Data Term
  - 10.3 Practical Aspects
  - 10.4 Numerical Methods
11. Continuous-Scale Morphology
  - 11.1 Basic Ideas
  - 11.2 Shock Filters and Nonflat Morphology
12. Curvature-Based Morphology
  - 12.1 Mean Curvature Motion
  - 12.2 Affine Morphological Scale-Space
13. PDE-Based Image Compression
  - 13.1 Data Selection
  - 13.2 Optimised Encoding and Better PDEs

**Modulnote** The final grade reflects the performance in the exam or re-exam.

**Sprache** English

## Lernziele / Kompetenzen

Students will learn basic concepts from differential geometry and how they can be applied to image analysis problems.

## Inhalt

The course is concerned with modern methods of digital image processing which rely on the differential geometry of curves and surfaces. This includes methods of image enhancement (like smoothing methods) as well as feature extraction and segmentation (like locating contours with active contour models).

The course aims at combining theoretical foundation directly with a variety of applications from the above-mentioned fields; the range of topics extends up to recent research problems.

An introduction to the relevant concepts and results from differential geometry will be included in the course.

Topics include:

- curves and surfaces in Euclidean space
- level sets
- curve and surface evolutions
- variational formulations and gradient descents
- diffusion of scalar and non-scalar data
- diffusion on manifolds
- active contours and active regions

**Sprache** English

## Lernziele / Kompetenzen

The main goal of the lecture is to develop an understanding of recent and state-of-the-art methods in high level computer vision, which are often based on Deep Neural Networks and Machine Learning.

## Inhalt

This course will cover essential techniques for high-level computer vision including deep learning and other modern machine learning methods. These techniques facilitate semantic interpretation of visual data, as it is required for a broad range of applications like robotics, driver assistance, multi-media retrieval, surveillance etc. In this area, the recognition and detection of objects, activities and visual categories have seen dramatic progress over the last decade. We will discuss the methods that have lead to state-of-the-art performance in this area and provide the opportunity to gather hands-on experience with these techniques.

Studiensem.	Regelst.sem.	Turnus	Dauer	SWS	ECTS
<b>1-2</b>	<b>4</b>	<b>occasional</b>	<b>1 semester</b>	<b>6</b>	<b>9</b>

**Modulverantwortliche/r** Dr. Pascal Peter

**Dozent/inn/en** Dr. Pascal Peter

**Zulassungsvoraussetzungen** Basic mathematics courses (such as *Mathematik für Informatiker I-III*) are required. Image processing lectures such as *Image Processing and Computer Vision* are helpful for some specific topics, but not necessary. For the programming assignments, some elementary knowledge of C is required.

**Leistungskontrollen / Prüfungen** Passing of the exam or the re-exam. These are open book written exams. Regular attendance at tutorials is expected. The tutorials include homework assignments as well as classroom assignments. Homework assignments are handed in and graded, while classroom assignments are solved during the tutorials. Homework consists of both theoretical and programming assignments, while classroom assignments are all theoretical. Working together in groups of up to 3 people is permitted and highly encouraged.

**Lehrveranstaltungen / SWS** 4 h lectures  
+ 2 h tutorials  
= 6 h (weekly)

**Arbeitsaufwand** 90 h of classes  
+ 180 h private study  
= 270 h (= 9 ECTS)

**Modulnote** The final grade reflects the performance in the exam or re-exam. The better grade counts.

**Sprache** English

## Lernziele / Kompetenzen

Motivation: High resolution image data is becoming increasingly popular in research and commercial applications (e.g. entertainment, medical imaging). In addition, there is also a high demand for content distribution via the internet. Due to the resulting increase in storage and bandwidth requirements, image compression is a highly relevant and very active area of research.

Teaching Goals: The course is designed as a supplement for image processing lectures, to be attended before, after or parallel to them. After the lecture, participants should understand the theoretical foundations of image compression and be familiar with a wide range of classical and contemporary compression methods.

## Inhalt

The lecture can be separated into two parts: The first half of the lecture deals with lossless image compression. We discuss the information theoretic background of so-called entropy coders (e.g. Huffman-coding, arithmetic coding, ...), talk about dictionary methods (e.g. LZW), and discuss state-of-the-art approaches like PPM and PAQ. These tools are not limited to compressing image data, but also form core parts of general data compression software such as BZIP2. Knowledge about entropy coding and prediction is key for understanding the classic and contemporary lossless codecs like PNG, gif or JBIG.

The second part of the lecture is dedicated to lossy image compression techniques. We deal with classic transformation based compression (JPEG, JPEG2000), but also with emerging approaches like inpainting-based compression. Furthermore, we consider related topics like human perception, error measurements, and offer a short introduction to video coding.

## Literaturhinweise

There is no specific book that covers the complete content of this class. However, each of the following books covers several of the topics discussed in the lecture:

- T. Strutz: Bilddatenkompression. Vieweg+Teubner (in German)
- D. Hankerson, G. A. Harris, and P. D. Johnson, Jr.: Introduction to Information Theory and Data Compression. Chapman & Hall/CRC
- K. Sayood: Introduction to Data Compression. Morgan Kaufmann

Further references will be given during the lecture.

## Lernziele / Kompetenzen

Broad introduction to mathematical methods in image processing and computer vision. The lecture qualifies students for a bachelor thesis in this field. Together with the completion of advanced or specialised lectures (9 credits at least) it is the basis for a master thesis in this field.

## Inhalt

Inhalt

1. Basics
  - 1.1 Image Types and Discretisation
  - 1.2 Degradations in Digital Images
2. Colour Perception and Colour Spaces
3. Image Transformations
  - 3.1 Continuous Fourier Transform
  - 3.2 Discrete Fourier Transform
  - 3.3 Image Pyramids
  - 3.4 Wavelet Transform
4. Image Compression
5. Image Interpolation
6. Image Enhancement
  - 6.1 Point Operations

- 6.2 Linear Filtering and Feature Detection
- 6.3 Morphology and Median Filters
- 6.3 Wavelet Shrinkage, Bilateral Filters, NL Means
- 6.5 Diffusion Filtering
- 6.6 Variational Methods
- 6.7 Deconvolution Methods
- 7. Texture Analysis
- 8. Segmentation
  - 8.1 Classical Methods
  - 8.2 Variational Methods
- 9. Image Sequence Analysis
  - 9.1 Local Methods
  - 9.2 Variational Methods
- 10. 3-D Reconstruction
  - 10.1 Camera Geometry
  - 10.2 Stereo
  - 10.3 Shape-from-Shading
- 11. Object Recognition
  - 11.1 Hough Transform
  - 11.2 Invariants
  - 11.3 Eigenspace Methods

## **Literaturhinweise**

Will be announced before the start of the course on the course page on the Internet.

Studiensem.	Regelst.sem.	Turnus	Dauer	SWS	ECTS

**Modulverantwortliche/r** Prof. Dr. Bernt Schiele

**Dozent/inn/en** Prof. Dr. Bernt Schiele

**Zulassungsvoraussetzungen** keine

**Leistungskontrollen / Prüfungen** Written or oral exam and the end of the course.

**Lehrveranstaltungen / SWS** 2 h lectures  
+ 2 h tutorial  
= 4 h (weekly)

**Arbeitsaufwand** 60 h of classes  
+ 120 h private study  
= 180 h (= 6 ECTS)

**Modulnote** Will be determined from performance in examinations and exercises. The exact modalities will be announced at the beginning of the course.

**Sprache** English

## Lernziele / Kompetenzen

The main goal of the class is to understand the concepts behind graphical models and to give hands-on knowledge such that one is able to design models for computer vision applications but also in other domains. Therefore the lecture is roughly divided in two parts: learning about graphical models and seeing them in action.

## Inhalt

This course will introduce the basic concepts of probabilistic graphical models. Graphical Models are a unified framework that allow to express complex probability distributions in a compact way. Many machine learning applications are tackled by the use of these models, in this course we will highlight the possibilities with computer vision applications.

## Literaturhinweise

Studiensem.	Regelst.sem.	Turnus	Dauer	SWS	ECTS
<b>1-2</b>	<b>4</b>	<b>occasional</b>	<b>1 semester</b>	<b>4</b>	<b>6</b>

**Modulverantwortliche/r** Prof. Dr. Joachim Weickert

**Dozent/inn/en** Prof. Dr. Joachim Weickert

**Zulassungsvoraussetzungen** Undergraduate mathematics such as *Mathematik für Informatiker I-III* is required. Knowledge of probability theory or statistics is helpful but not required

**Leistungskontrollen / Prüfungen** The homework assignments are intended to be solved at home and have to be submitted in the lecture break, or earlier. In order to qualify for the exams one must obtain 50% of the possible points on average.

**Lehrveranstaltungen / SWS** 2 h lectures  
+ 2 h tutorials  
= 2 h (weekly)

**Arbeitsaufwand** 60 h of classes  
+ 120 h private study  
= 180 h (= 6 ECTS)

**Modulnote** The grade reflects the performance in the exam or the re-exam. The better grade counts. The modality of the exam (written or oral) will be communicated in the beginning of the lecture.

**Sprache** English

## Lernziele / Kompetenzen

Probabilistic techniques are employed quite successfully in the processing and analysis of images, however, they also play a vital role in pattern classification, data mining and learning theory. This lecture introduces to some of the basic approaches.

## Inhalt

In this course we will discuss

- basic notions from probability theory and statistics as well as from image processing
- histogram based image analysis and enhancement methods
- the probabilistic background of the Karhunen-Loeve expansion used for data compression, for example
- independent component analysis and applications
- the notion of entropy in image registration
- and, if time permits, we will give an introduction to the basic ideas of Markov random fields and simulated annealing.

## Literaturhinweise

Relevant references will be provided in the lecture.

Dr. Vahid Babaei

**Zulassungsvoraussetzungen** Some background in visual computing is recommended but not required.

**Leistungskontrollen / Prüfungen** Nanoquiz: At the beginning of each lecture, we ask a few questions as a recapitulation of the last class.

Programming Assignment: The assignments give you the opportunity to apply what you have learned in class. It is also a chance for you to let us know about the topics that give you particular difficulty.

Project: You will have the opportunity to see your new learnings applied in a research context. You will start the projects (in groups of two or three) in the middle of the semester and you will present them during the last session and deliver a report.

Exam: There will be an oral exam.

**Lehrveranstaltungen / SWS** 2 h lectures  
+ 2 h tutorial  
= 4 h (weekly)

**Arbeitsaufwand** 60 h of classes  
+ 120 h private study  
= 180 h (= 6 ECTS)

**Modulnote**

- Nanoquiz
- Assignments
- Project
- Exam

The exact modalities will be announced at the beginning of the module.

**Sprache** English

## Lernziele / Kompetenzen

After successful completion of this course, you will be able to:

- Explain the fundamental mission of Computational Fabrication, why it is relevant and what is the necessary skill set for successfully applying it to real-world problems.
- Evaluate different representations of geometric models for manufacturing and create easily modifiable shapes.
- Review different manufacturing technologies, with a focus on additive manufacturing (3D printing), and analyze their advantages and disadvantages.
- Analyze the appearance reproduction workflow, including measuring, modeling and fabrication of object's appearance.
- Apply halftoning algorithms to enable printers to approximate continuous inputs, thereby overcoming their inherent binary limitation.
- Understand necessary components for simulating the deformation of solid objects using the finite element method (FEM), including different measures of deformation, constitutive models of materials, and measuring mechanical properties of objects.

## **Inhalt**

- Solid Modeling
- 3D Printing Software Pipeline
- 3D Printing Hardware Pipeline
- Halftoning Algorithms
  - Appearance Printing Pipeline
- Mass Spring Systems
- Continuum Mechanics
- Finite Element Method
- Design Space Exploration

## **Literaturhinweise**

Unfortunately, there is no single textbook covering all materials of this course. We provide reading materials (mostly accessible online) at the end of each lecture.

Studiensem.	Regelst.sem.	Turnus	Dauer	SWS	ECTS
<b>1-2</b>	<b>4</b>	<b>at least every two years</b>	<b>1 semester</b>	<b>6</b>	<b>9</b>

**Modulverantwortliche/r** Prof. Dr. Philipp Slusallek

**Dozent/inn/en** Prof. Dr. Philipp Slusallek

**Zulassungsvoraussetzungen** Solid knowledge of linear algebra is recommended.

**Leistungskontrollen / Prüfungen**

- Successful completion of weekly exercises (30% of final grade)
- Successful participation in rendering competition (10%)
- Mid-term written exam (20%, final exam prerequisite)
- Final written exam (40%)
- In each of the above a minimum of 50% is required to pass

A re-exam typically takes place during the last two weeks before the start of lectures in the following semester.

**Lehrveranstaltungen / SWS** 4 h lectures  
+ 2 h tutorial  
= 6 h (weekly)

**Arbeitsaufwand** 90 h of classes  
+ 180 h private study  
= 270 h (= 9 ECTS)

**Modulnote** The grade is derived from the above assessments. Possible changes will be announced at the beginning of each semester.

**Sprache** English

## Lernziele / Kompetenzen

This course provides the theoretical and practical foundation for computer graphics. It gives a wide overview of topics, techniques, and approaches used in various aspects of computer graphics but has some focus on image synthesis or rendering. The first part of the course uses ray tracing as a driving applications to discuss core topics of computer graphics, from vector algebra all the way to sampling theory, the human visual system, sampling theory, and spline curves and surfaces. A second part then uses rasterization approach as a driving example, introducing the camera transformation, clipping, the OpenGL API and shading language, plus advanced techniques.

As part of the practical exercises the students incrementally build their own ray tracing system. Once the basics have been covered, the students participate in a rendering competition. Here they can implement their favorite advanced algorithm and are asked to generate a high-quality rendered image that shows their techniques in action.

## Inhalt

- Introduction
- Overview of Ray Tracing and Intersection Methods
- Spatial Index Structures
- Vector Algebra, Homogeneous Coordinates, and Transformations
- Light Transport Theory, Rendering Equation
- BRDF, Materials Models, and Shading
- Texturing Methods
- Spectral Analysis, Sampling Theory
- Filtering and Anti-Aliasing Methods

- Recursive Ray Tracing & Distribution Ray-Tracing
- Human Visual System & Color Models
- Spline Curves and Surfaces
- Camera Transformations & Clipping
- Rasterization Pipeline
- OpenGL API & GLSL Shading
- Volume Rendering (opt.)

## **Literaturhinweise**

Will be announced in the lecture.

Studiensem.	Regelst.sem.	Turnus	Dauer	SWS	ECTS

**Modulverantwortliche/r** Prof. Dr. Hans-Peter Seidel

**Dozent/inn/en** Prof. Dr. Hans-Peter Seidel  
Dr. Rhaleb Zayer

**Zulassungsvoraussetzungen** calculus and basic programming skills

**Leistungskontrollen / Prüfungen**

- Regular attendance and participation.
- Weekly Assignments (10% bonus towards the course grade; bonus points can only improve the grade; they do not affect passing)
- Passing the written exams (mid-term and final exam).
- The mid-term and the final exam count for 50% each, but 10% bonus from assignments will be added.
- A re-exam takes place at the end of the semester break or early in the next semester.

**Lehrveranstaltungen / SWS** 4 h lectures  
+ 2 h tutorial  
= 6 h (weekly)

Practical assignments in groups of 3 students (practice)  
Tutorials consists of a mix of theoretical + practical assignments.

**Arbeitsaufwand** 90 h of classes  
+ 180 h private study  
= 270 h (= 9 ECTS)

**Modulnote** Will be based on the performance in exams, exercises and practical tasks. The detailed terms will be announced by the module coordinator.

**Sprache** English

## Lernziele / Kompetenzen

Gaining knowledge of the theoretical aspect of geometric modelling problems, and the practical solutions used for modelling and manipulating curves and surfaces on a computer. From a broader perspective: Learning how to represent and interact with geometric models in a discretized, digital form (geometric representations by functions and samples; design of linear function spaces; finding “good” functions with respect to a geometric modelling task in such spaces).

## Inhalt

- Differential geometry Fundamentals
- Interpolation and Approximation
- Polynomial Curves
- Bezier and Rational Bezier Curves
- B-splines, NURBS
- Spline Surfaces
- Subdivision and Multiresolution Modelling
- Mesh processing
- Approximation of differential operators
- Shape Analysis and Geometry Processing

## **Literaturhinweise**

Will be announced before the term begins on the lecture website.

**Sprache** English

## Lernziele / Kompetenzen

The target audience are students in computer science or related fields. This course covers topics from psychology and physiology that are relevant to computer graphics, and novel perception research and applications in computer graphics and vision. The objective is to transfer knowledge, experience and competencies that are required for doing research in perceptual computer graphics, and that are useful in many related fields, such as experimental psychology, or usability studies in human-computer interaction.

## Inhalt

As computer graphics is producing images and videos that are ultimately perceived by a human, it's mandatory to account for how the human visual system (HVS) is processing this information. The HVS is complex, exhibiting many non-linearities as well as feedback and is only partially understood. While this poses a challenge, it can also be seen as an opportunity which can be exploited in image compression, watermarking, denoising, enhancement, upsampling, etc. Computational models which can predict the human response to the distortion of visual content are important when this opportunity is taken. To this end, our course covers the basic theory of perception research, including:

- What is perception?
- Designing experiments,
- Analysis and statistics,

and the practical applications in computer graphics, including:

- Eye physiology and image formation,
- Brightness and contrast,
- Color,
- High dynamic range and tone reproduction,
- Image compression and image quality,
- Depth and shape perception,
- Material perception.

## Lernziele / Kompetenzen

At the core of computer graphics is the requirement to render highly realistic and often even physically-accurate images of virtual 3D scenes. In this lecture students will learn about physically-based lighting simulation techniques to compute the distribution of light even in complex environment. The course also covers issues of perception of images, including also HDR technology, display technology, and related topics.

After this course students should be able to build their own highly realistic but also efficient rendering system.

## Inhalt

- Rendering Equation
- Radiosity and Finite-Element Techniques
- Probability Theory
- Monte-Carlo Integration & Importance Sampling
- Variance Reduction & Advanced Sampling Techniques
- BRDFs and Inversion Methods
- Path Tracing & \* Bidirectional Path Tracing
- Virtual Point-Light Techniques
- Density Estimation & Photon Mapping
- Vertex Connection & Merging
- Path Guiding
- Spatio-Temporal Sampling & Reconstruction
- Approaches for Interactive Global Illumination
- Machine Learning Techniques in Rendering

- Human Perception
- HDR & Tone-Mapping
- Modern Display Technology
- Perception-Based Rendering

## Literaturhinweise

Literature will be announced in the first lecture of the semester.

**Sprache** English

## Lernziele / Kompetenzen

The students will gain a deep understanding of algorithms used in Automatic Planning for the efficient exploration of large state spaces, from both a theoretical and practical point of view. The programming exercises will familiarize them with the main implementation basis in Automatic Planning. The search algorithms are generic and are relevant also in other CS sub-areas in which large transition systems need to be analyzed.

## Inhalt

Automatic Planning is one of the fundamental sub-areas of Artificial Intelligence, concerned with algorithms that can generate strategies of action for arbitrary autonomous agents in arbitrary environments. The course examines the technical core of the current research on solving this kind of problem, consisting of paradigms for automatically generating heuristic functions (lower bound solution cost estimators), as well as optimality-preserving pruning methods. Apart from understanding these techniques themselves, the course explains how to analyze, combine, and compare them.

Starting from an implementation basis provided, students implement their own planning system as part of the course. The course is concluded by a competition between these student systems.

## Lernziele / Kompetenzen

Knowledge about basic methods in Artificial Intelligence

## Inhalt

Problem-solving:

- Uninformed- and informed search procedures
- Adversarial search

Knowledge and reasoning:

- Propositional logic
- SAT
- First-order logic, Inference in first-order logic
- Knowledge representation, Semantic Web
- Default logic, rule-based mechanisms

Planning:

- STRIPS formalism and complexity
- Delete relaxation heuristics

Probabilistic reasoning:

- Basic probabilistic methods
- Bayesian networks

## **Literaturhinweise**

**Sprache** English

## Lernziele / Kompetenzen

AVCN will deepen the students' knowledge on modern communications systems and will focus on wireless systems.

Since from a telecommunications perspective the combination of audio/visual data – meaning inherently high data rate and putting high requirements on the realtime capabilities of the underlying network – and wireless transmission – that is unreliable and highly dynamic with respect to the channel characteristics and its capacity – is the most demanding application domain.

## Inhalt

As the basic principle the course will study and introduce the building blocks of wireless communication systems. Multiple access schemes like TDMA, FDMA, CDMA and SDMA are introduced, antennas and propagation incl. link budget calculations are dealt with and more advanced channel models like MIMO are investigated. Modulation and error correction technologies presented in Telecommunications I will be expanded by e.g. turbo coding and receiver architectures like RAKE and BLAST will be introduced. A noticeable portion of the lecture will present existing and future wireless networks and their extensions for audio/visual data. Examples include 802.11n and the terrestrial DVB system (DVB-T2).

## Literaturhinweise

Will be announced before the start of the course on the course page on the Internet.

## **Weitere Informationen**

This module was formerly also known as *Telecommunications II*.

Studiensem.	Regelst.sem.	Turnus	Dauer	SWS	ECTS

**Dozent/inn/en** Prof. Dr.-Ing. Thorsten Herfet

**Zulassungsvoraussetzungen** The lecture requires a solid foundation of mathematics (differential and integral calculus) and probability theory. The course will, however, refresh those areas indispensably necessary for telecommunications and potential intensification courses and by this open this potential field of intensification to everyone of you.

**Leistungskontrollen / Prüfungen** Regular attendance of classes and tutorials  
 Passing the final exam in the 2nd week after the end of courses.  
 Eligibility: Weekly exercises / task sheets, grouped into two blocks corresponding to first and second half of the lecture. Students must provide min. 50% grade in each of the two blocks to be eligible for the exam.

**Lehrveranstaltungen / SWS** 4 h lectures  
 + 2 h tutorial  
 = 6 h (weekly)

**Arbeitsaufwand** 90 h of classes  
 + 180 h private study  
 = 270 h (= 9 ECTS)

**Modulnote** Final exam mark

**Sprache** English

## Lernziele / Kompetenzen

Digital Signal Transmission and Signal Processing refreshes the foundation laid in "Signals and Systems" [Modulkennung]. Including, however, the respective basics so that the various facets of the introductory study period (Bachelor in Computer Science, Vordiplom Computer- und Kommunikationstechnik, Elektrotechnik or Mechatronik) and the potential main study period (Master in Computer Science, Diplom-Ingenieur Computer- und Kommunikationstechnik or Mechatronik) will be paid respect to.

## Inhalt

As the basic principle, the course will give an introduction into the various building blocks that modern telecommunication systems do incorporate. Sources, sinks, source and channel coding, modulation and multiplexing are the major keywords, but we will also deal with dedicated pieces like A/D- and D/A-converters and quantizers in a little bit more depth.

The course will refresh the basic transformations (Fourier, Laplace) that give access to system analysis in the frequency domain, it will introduce derived transformations (z, Hilbert) for the analysis of discrete systems and modulation schemes and it will briefly introduce algebra on finite fields to systematically deal with error correction schemes that play an important role in modern communication systems.

## Literaturhinweise

Will be announced before the start of the course on the course page on the Internet.

## Lernziele / Kompetenzen

Overview of challenges and methods in Data Science and AI. Basic knowledge of key concepts and algorithms.

## Inhalt

Introduction to history and concepts of Data Science and AI

- Machine Learning (supervised, unsupervised, reinforcement, neural networks)
- (adversarial) Search, Planning
- Reasoning
- Modeling and Simulation
- Data Management, Big Data Engineering, and Analytics

The methods will be covered in the context of applications, such as Game Playing, Computer Vision, Autonomous Driving, Language Processing, Social Networks.

The exercises will cover methodological, algorithmic, as well as practical aspects. Where basic programming or scripting skills are required, the lecture and exercises will introduce these skills.

## Lernziele / Kompetenzen

In diesem Kurs werden grundlegende Konzepte des maschinellen Lernens behandelt, wobei der Schwerpunkt auf statistischen Methoden liegt. Der Kurs vermittelt die nötigen Fähigkeiten um für einen gegebenen Datensatz geeignete statistische Methoden für dessen Analyse auszuwählen, anzuwenden, und die Qualität der Resultate zu bewerten. Der Kurs behandelt sowohl theoretische als auch praktische Aspekte des maschinellen Lernens, legt den Fokus jedoch auf praktische Aspekte.

Die Vorlesung folgt im Großen und Ganzen dem Buch "An Introduction to Statistical Learning with Applications in R (2013)". In einigen Fällen erhält der Kurs zusätzliches Material aus dem Buch The Elements of Statistical Learning, Springer (second edition, 2009). Das erste Buch ist der einleitende Text, das zweite behandelt fortgeschrittenere Themen. Beide Bücher sind als kostenlose PDFs erhältlich. Es wird durchschnittlich eine Vorlesung pro Woche (90 Minuten) und alle zwei Wochen (90 Minuten) ein Tutorium angeboten.

## Inhalt

Die Vorlesung behandelt grundlegende Methoden des maschinellen Lernens, insbesondere folgende Inhalte:

- Introduction to statistical learning
- Overview over Supervised Learning
- Linear Regression

- Linear Classification
- Splines
- Model selection and estimation of the test errors
- Maximum-Likelihood Methods
- Additive Models
- Decision trees
- Boosting
- Dimensionality reduction
- Unsupervised learning

Studiensem.	Regelst.sem.	Turnus	Dauer	SWS	ECTS
<b>3</b>	<b>4</b>	<b>at least every two years</b>	<b>1 semester</b>	<b>6</b>	<b>9</b>

**Modulverantwortliche/r** Prof. Dr. Jürgen Steimle

**Dozent/inn/en** Prof. Dr. Jürgen Steimle

**Zulassungsvoraussetzungen** undergraduate students: *Programmierung 1* and *2*  
graduate students: none

**Leistungskontrollen / Prüfungen** Regular attendance of classes and tutorials  
Successful completion of exercises and course project  
Final exam  
A re-exam takes place (as written or oral examination).

**Lehrveranstaltungen / SWS** 4 h lectures  
+ 2 h tutorial  
= 6 h (weekly)

**Arbeitsaufwand** 90 h of classes  
+ 180 h private study  
= 270 h (= 9 ECTS)

**Modulnote** Will be determined from performance in exams, exercises and practical tasks. The exact modalities will be announced at the beginning of the module.

**Sprache** English

## Lernziele / Kompetenzen

This course teaches the theoretical and practical foundations for human computer interaction. It covers a wide overview of topics, techniques and approaches used for the design and evaluation of modern user interfaces.

The course covers the principles that underlie successful user interfaces, provides an overview of input and output devices and user interface types, and familiarizes students with the methods for designing and evaluating user interfaces. Students learn to critically assess user interfaces, to design user interfaces themselves, and to evaluate them in empirical studies.

## Inhalt

- Fundamentals of human-computer interaction
- User interface paradigms, input and output devices
- Desktop & graphical user interfaces
- Mobile user interfaces
- Natural user interfaces
- User-centered interaction design
- Design principles and guidelines
- Prototyping

## Literaturhinweise

Will be announced before the start of the course on the course page on the Internet.

Studiensem.	Regelst.sem.	Turnus	Dauer	SWS	ECTS
<b>3</b>	<b>4</b>	<b>at least every two years</b>	<b>1 semester</b>	<b>6</b>	<b>9</b>

**Modulverantwortliche/r** Prof. Dr. Gerhard Weikum

**Dozent/inn/en** Prof. Dr. Gerhard Weikum

**Zulassungsvoraussetzungen** Good knowledge of undergraduate mathematics (linear algebra, probability theory) and basic algorithms.

**Leistungskontrollen / Prüfungen**

- Regular attendance of classes and tutor groups
- Presentation of solutions in tutor groups
- Passing 2 of 3 written tests (after each third of the semester)
- Passing the final exam (at the end of the semester)

**Lehrveranstaltungen / SWS** 4 h lectures  
+ 2 h tutorial  
= 6 h (weekly)

**Arbeitsaufwand** 90 h of classes  
+ 180 h private study  
= 270 h (= 9 ECTS)

**Modulnote** Will be determined by the performance in written tests, tutor groups, and the final exam. Details will be announced on the course web site.

**Sprache** English

## Lernziele / Kompetenzen

The lecture teaches models and algorithms that form the basis for search engines and for data mining and data analysis tools.

## Inhalt

Information Retrieval (IR) and Data Mining (DM) are methodologies for organizing, searching and analyzing digital contents from the web, social media and enterprises as well as multivariate datasets in these contexts. IR models and algorithms include text indexing, query processing, search result ranking, and information extraction for semantic search. DM models and algorithms include pattern mining, rule mining, classification and recommendation. Both fields build on mathematical foundations from the areas of linear algebra, graph theory, and probability and statistics.

**Modulverantwortliche/r** Prof. Dr. Isabel Valera

**Dozent/inn/en** Prof. Dr. Isabel Valera

**Zulassungsvoraussetzungen** The lecture gives a broad introduction into machine learning methods. After the lecture the students should be able to solve and analyze learning problems.

**Leistungskontrollen / Prüfungen**

- Regular attendance of classes and tutorials.
- 50% of all points of the exercises have to be obtained in order to qualify for the exam.
- Passing 1 out of 2 exams (final, re-exam).

**Lehrveranstaltungen / SWS** 4 h lectures  
+ 2 h tutorial  
= 6 h (weekly)

**Arbeitsaufwand** 90 h of classes  
+ 180 h private study  
= 270 h (= 9 ECTS)

**Modulnote** Determined from the results of the exams, exercises and potential projects. The exact grading modalities are announced at the beginning of the course.

**Sprache** English

## Lernziele / Kompetenzen

The lecture gives a broad introduction into machine learning methods. After the lecture the students should be able to solve and analyze learning problems.

## Inhalt

- Bayesian decision theory
- Linear classification and regression
- Kernel methods
- Bayesian learning
- Semi-supervised learning
- Unsupervised learning
- Model selection and evaluation of learning methods
- Statistical learning theory
- Other current research topics

## Literaturhinweise

Will be announced before the start of the course on the course page on the Internet.

**Zulassungsvoraussetzungen** For graduate students: none

**Leistungskontrollen / Prüfungen** Regular attendance of classes and tutorial.  
Paper as well as programming exercises for exam qualification  
Final exam  
A re-exam takes place before the start of lectures in the following semester

**Lehrveranstaltungen / SWS** 3 h lectures  
+ 1 h tutorial  
= 4 h (weekly)

**Arbeitsaufwand** 60 h of classes  
+ 90 h private study  
+ 120 h programming exercise  
= 270 h (= 9 ECTS)

**Modulnote** Graded absolute 1.0-n.b. and relative A-F

**Sprache** English

## Lernziele / Kompetenzen

The course deals with Media Transport over the Internet. After the course students know how data- and mediatransport is solved in today's Internet and have a good understanding of so called erasure channels.

Besides the pure transport protocol design the course complements the fundamentals laid in TCI and TCII by introducing state-of-the-art error codes (Van-der-Monde-Codes, Fountain Codes) and by engineering tasks like the design of a Digital PLL.

## Inhalt

The course introduces media transmission over packet channels, specifically the Internet. After establishing a Quality of Service framework built on ITU requirements the course models erasure channels without and with memory. Key characteristics like the channel capacity and the minimum redundancy information are derived.

The second part of the course introduces current media transport protocol suites (TCP, UDP, RTP, RTSP) and middleware (ISMA, DLNA, UPnP, DVB-IP).

In the second half of the course audiovisual coders used in the Internet are introduced (H.264, AAC), state-of-the-art forward error coding schemes (Van-der-Monde-Codes, Fountain Codes) are explained and essential elements like a Digital Phase-locked Loop are developed.

## Literaturhinweise

The course will come with a self contained manuscript. The most essential monographs used for and referenced within the manuscript are available in the Computer Science Library of Saarland University.

## **Weitere Informationen**

This module was formerly also known as *Future Media Internet*.

**Zulassungsvoraussetzungen** *Mathematik für Informatiker I - III* or comparable; good programming skills.

**Leistungskontrollen / Prüfungen** Written Exam

**Lehrveranstaltungen / SWS** 2 h lectures  
+ 2 h tutorial  
= 4 h (weekly)

**Arbeitsaufwand** 60 h of classes  
+ 120 h private study  
= 180 h (= 6 ECTS)

**Modulnote** Based on written exam. Exact details will be announced in the first lecture.

**Sprache** English

## Lernziele / Kompetenzen

The participants will be introduced to the key ideas of basic classification algorithms and in particular neural networks. A focus is also the implementation and applications to relevant problems.

## Inhalt

- Classification
- Regression
- Linear Classifiers
- Perceptron
- Support Vector Machines
- Multy-Layer Perceptrons
- Deep Learning Software
- Autoencoders
- LSTMs
- Recurrent Neural Networks
- Sequence-to-sequence learning

## Lernziele / Kompetenzen

Acquire core competencies in the mathematical basics of language processing and practice the implementation of essential methods.

## Inhalt

- language processing: basic terms
- mathematical foundations
- word sense disambiguation
- part-of-speech tagging
- named-entity recognition
- information retrieval
- text classification

## Lernziele / Kompetenzen

- Thorough understanding of selected advanced topics in data analysis.
- Ability to quickly understand the main gist in scientific literature, without getting lost in details, critically assessing claims, seeing through the hype.
- Ability to comparatively analyse and reason about (seemingly disparate) concepts and methods, quickly developing meta-level understanding of advanced topics.

## Inhalt

During the course we consider hot topics in machine learning and data mining that are also important to understand deeply. The exact topics we will cover will differ per year, but for example often include aspects of Pattern Discovery, Dependency Discovery, Causal Inference, and Fairness.

## Literaturhinweise

Recent scientific publications from the top venues in machine learning and data mining.

## Lernziele / Kompetenzen

Erlernen und verstehen akustischer (mechanischer) und elektromagnetischer Prüfverfahren

## Inhalt

### Einführung:

Was ist zerstörungsfreie Prüfung? Warum ZfP? Qualitätssicherung, Schadenstolerantes Bauen

### Schwingungen:

Harmonische ungedämpfte Schwingung einer federnd gelagerten Masse; Periodische Funktionen und Fourier-Analyse; Nutzung der harmonischen Schwingungen zur Schadensanalyse (elementare Modalanalyse) durch Ableitung der Verformungsgleichungen am Biegebalken; Modalanalyse am delaminierten Biegebalken; Gekoppelte Schwingungen; Steifigkeitsmatritzen; Viskos gedämpfte Schwingung und Dämpfung als Parameter; Anwendungen der Modalanalyse; Freie Seilschwingungen; Wellengleichung und Wellenausbreitung; Seilschwingungen auf elastischer Basis; Wellenausbreitung auf elastischer Basis und Dispersion; Phasengeschwindigkeit und Gruppengeschwindigkeit.

### Akustik und Ultraschall:

Elementare Wellenformen: Longitudinalwellen, Transversalwellen, Oberflächenwellen, Volumenwellen; Parameter der Wellenausbreitung (Amplitude, Frequenz, Phase, Geschwindigkeit, etc.); Eindimensionale Wellenausbreitung; Wellenausbreitung und Steifigkeit; Akustische Impedanz; Räumliche Wellenausbreitung; Reflexion und Transmission; Snellius'sches Brechungsgesetz; Parameter des Schalls (Geschwindigkeit, Intensität, Dämpfung, Temperatur); Schwingungsformen und Frequenzspektrum; Akustische Schwingungen und mechanische Spannungen wie Spannungsanalyse (1D, 2D, 3D), Umwandlung von Spannungen in Dehnungen, Spannungstensoren, Verallgemeinertes Hooke'sches Gesetz, Anisotropie; Geführte Wellen (Oberflächenwellen, Plattenwellen); Piezoelektrischer Effekt zur Schallerzeugung; Piezoelektrische Wandler (Aufbau, Kopplung); Schallausbreitung (Nahfeld, Fernfeld, Abstrahlverhalten); Fehlererkennung (Wellenlänge vs. Fehlergröße); Formen der US-Prüfung (Pitch-Catch vs. Puls-Echo); Bedeutung des Einschallwinkels; Aufbau eines Ultraschallprüfgeräts; Fehlerprüfung (6 dB-Methode, Ersatzfehlergrößen, AVG-Diagramm); Darstellung von US-Ergebnissen (A-, B-, C- und D-Diagramm, 3D-Visualisierung); Prüfung mit Gruppenstrahlern (Phased Array); Synthetic Aperture Focussing Technique (SAFT); Ausbreitung von Ultraschallwellen; Time of Flight Diffraction (TOFD); Detektion von Rissen (Inspektionsstrategien, Fehlermöglichkeiten); Luftultraschall; Laser-induzierter Ultraschall; Elektromagnetisch induzierter Ultraschall (EMUS); Prüfung mit Ultraschall (Beispiele): Schweißnähte,

Schichtdicken (z.B. Härtetiefen), Eisenbahnachsen, Eisenbahnräder, Lichtmaste, Pipelines, Prüfung heißer Rohre, Akustisches Mikroskop; Zukunft des Ultraschalls – Structural Health Monitoring

### **Magnetik:**

Magnete und Magnetfelder; Spulen; Ursachen der Magnetik (Atommodelle); Magnetische Induktion (Permeabilität, Induktivität, Hall-Effekt, Giant Magnetic Resistors (GMR)); Hauptarten des Magnetismus (Ferromagnetismus, Paramagnetismus, Diamagnetismus); Magnetische Hysterese; Erzeugen von Magnetfeldern; Superposition von Magnetfeldern; Messung von Magnetfeldern; Magnetisches Prüfkonzept; Magnetisierung und Mikrostruktur (Domänen, Bloch-Wände, Weiß'sche Bezirke, etc.); Permeabilität; Streufluss; Oberwellenanalyse; Barkhausenrauschen; Wirbelstromimpedanz; 3MA-Konzept und seine Anwendungen: Spannungsmessungen (1D, 2D, Eigenspannungen), Härtemessung, Härtetiefe, Schleifbrand, Restaustenit, Simultane Messungen; Weitere Anwendungsbeispiele: Materialversprödung, Plastische Dehnung; Magnetische Kraftmikroskopie (Magnetik auf der Mikroebene): Schichtdicken, Eigenspannungen.

### **Wirbelstrom:**

Induktivität (Faraday-Regel); Selbstinduktivität; Induzierter Widerstand (Lenz'sche Regel); Elektrische Impedanz; Prinzip des Wirbelstroms; Wirbelstrom in Medien; Eindringtiefe (Skin-Effekt); Impedanzebenen und Interpretation; Messprinzip des Wirbelstroms: Messaufbau, Spulen, Absolut- versus Differenzprüfköpfen, Magnetfeldbeeinflussung, Kalibrieren, Analoggeräte: Anwendungsbeispiele: Werkstoffdetektion (Verwchslungsprüfung), Dickenprüfung, Kohlefaserverbundprüfung, Charakterisierung von Korrosionszuständen.

# Seminar

Studiensem.	Regelst.sem.	Turnus	Dauer	SWS	ECTS
<b>3</b>	<b>4</b>	<b>jedes Semester</b>	<b>1 Semester</b>	<b>2</b>	<b>7</b>

**Modulverantwortliche/r** Studiendekan der Fakultät Mathematik und Informatik  
Studienbeauftragter der Informatik

**Dozent/inn/en** Professoren der Fachrichtung

**Zulassungsvoraussetzungen** Grundlegende Kenntnisse im jeweiligen Teilbereich der Studienganges.

**Leistungskontrollen / Prüfungen**

- Beiträge zur Diskussion
- Thematischer Vortrag
- Schriftliche Ausarbeitung
- Mündliche Abschlussprüfung über das gesamte Themengebiet

**Lehrveranstaltungen / SWS** 2 SWS Seminar

**Arbeitsaufwand** 30 h Präsenzstudium  
+ 180 h Eigenstudium  
= 210 h (= 7 ECTS)

**Modulnote** Die Modalitäten der Notenvergabe werden vom verantwortlichen Hochschullehrer festgelegt.

**Sprache** Deutsch oder Englisch

## Lernziele / Kompetenzen

Die Studierenden haben am Ende der Veranstaltung ein tiefes Verständnis aktueller oder fundamentaler Aspekte eines spezifischen Teilbereiches der Informatik erlangt.

Sie haben Kompetenz im eigenständigen wissenschaftlichen Recherchieren, Einordnen, Zusammenfassen, Diskutieren, Kritisieren und Präsentieren von wissenschaftlichen Erkenntnissen gewonnen.

## Inhalt

Praktisches Einüben von

- reflektierender wissenschaftlicher Arbeit,
- Analyse und Bewertung wissenschaftlicher Aufsätze,
- Verfassen eigener wissenschaftlicher Zusammenfassungen
- Diskussion der Arbeiten in der Gruppe
- Erarbeiten gemeinsamer Standards für wissenschaftliches Arbeiten
- Präsentationstechnik

Spezifische Vertiefung in Bezug auf das individuelle Thema des Seminars.

Der typische Ablauf eines Seminars ist wie folgt:

- Vorbereitende Gespräche zur Themenauswahl
- Regelmäßige Treffen mit Diskussion ausgewählter Beiträge
- Vortrag und Ausarbeitung zu einem der Beiträge
- Mündliche Prüfung über das erarbeitete Themengebiet

## **Literaturhinweise**

dem Thema entsprechend

## **Weitere Informationen**

Die jeweils zur Verfügung stehenden Seminare werden vor Beginn des Semesters angekündigt und unterscheiden sich je nach Studiengang.

# Master Seminar (Visual Computing)

Studiensem.	Regelst.sem.	Turnus	Dauer	SWS	ECTS
<b>3</b>	<b>4</b>	<b>every semester</b>	<b>1 semester</b>	<b>2</b>	<b>7</b>

**Modulverantwortliche/r** Dean of Studies of the Faculty of Mathematics and Computer Science  
Study representative of computer science

**Dozent/inn/en** Professors of the department

**Zulassungsvoraussetzungen** Acquisition of at least 30 CP

**Leistungskontrollen / Prüfungen**

- Preparation of the relevant scientific literature
- Written elaboration of the topic of the master thesis
- Presentation about the planned topic with subsequent discussion
- Active participation in the discussion

**Lehrveranstaltungen / SWS** 2 h seminar (weekly)

**Arbeitsaufwand** 30 h seminar  
+ 30 h contact with supervisor  
+ 150 h private study  
= 210 h (= 7 ECTS)

**Modulnote** graded

**Sprache** English or German

## Lernziele / Kompetenzen

The Master seminar sets the ground for carrying out independent research within the context of an appropriately demanding research area. This area provides sufficient room for developing own scientific ideas.

At the end of the Master seminar, the basics ingredients needed to embark on a successful Master thesis project have been explored and discussed with peers, and the main scientific solution techniques are established.

The Master seminar thus prepares the topic of the Master thesis. It does so while deepening the students' capabilities to perform a scientific discourse. These capabilities are practiced by active participation in a reading group. This reading group explores and discusses scientifically demanding topics of a coherent subject area.

## Inhalt

The methods of computer science are systematically applied, on the basis of the "state-of-the-art".

## Literaturhinweise

Scientific articles corresponding to the topic area in close consultation with the lecturer.

# Master Thesis

Studiensem.	Regelst.sem.	Turnus	Dauer	SWS	ECTS
<b>4</b>	<b>4</b>	<b>every semester</b>	<b>6 months</b>	<b>-</b>	<b>30</b>

**Modulverantwortliche/r** Dean of Studies of the Faculty of Mathematics and Computer Science  
Study representative of computer science

**Dozent/inn/en** Professors of the department

**Zulassungsvoraussetzungen** Successful completion of the *Master Seminar*

**Leistungskontrollen / Prüfungen** Written elaboration in form of a scientific paper. It describes the scientific findings as well as the way leading to these findings. It contains justifications for decisions regarding chosen methods for the thesis and discarded alternatives. The student's own substantial contribution to the achieved results has to be evident. In addition, the student presents his work in a colloquium, in which the scientific quality and the scientific independence of his achievements are evaluated.

**Lehrveranstaltungen / SWS** none

**Arbeitsaufwand** 50 h contact with supervisor  
+ 850 h private study  
= 900 h (= 30 ECTS)

**Modulnote** Grading of the Master Thesis

**Sprache** English or German

## Lernziele / Kompetenzen

In the master thesis the student demonstrates his ability to perform independent scientific work focusing on an adequately challenging topic prepared in the master seminar.

## Inhalt

In the master thesis the student demonstrates his ability to perform independent scientific work focusing on an adequately challenging topic prepared in the master seminar.

## Literaturhinweise

According to the topic
